

To make git ignore files create a .gitignore file and mention the files taht you want to git to ignore.

I have created a error.log file and logs folder. I want git to ignore those file so i have created a .gitignore file .

```
1 *.log
2 Logs/
```

After adding those to .gitignore file and lets verify using git status command.

Only .gitignore file is not tracked yet even though there is error.log and Logs folder. Git is ignoring those files.

```
etams@RAM MINGW64 /d/Deepskilling/GitDemo (main)
$ git status
On branch main
Untracked files:
  (use "git add <file>..." to include in what will be committed)
    .gitignore

nothing added to commit but untracked files present (use "git add" to track)
```

After committing changes, the ignored files are not visible in remote repository too.

Name	Last commit	Last update
 .gitignore	Added .gitignore file	1 minute ago
 README.md	Initial commit	26 minutes ago
 welcome.txt	This is a GEtDemo repo with a we...	31 minutes ago
